Ski gloves	73	
Winter beanies	93	
Ski socks	117	

What's new

Helmet **STEALTH PHOTO**

One helmet. One visor. All conditions. Stealth without compromise.

The iconic Stealth model, appreciated for its comfort and precise ergonomics, comes in a new generation with a photochromic visor. The result is a helmet that reads the conditions for you and gives you the freedom to ride at full throttle. **PHOTOCHROMIC** technology automatically adjusts the visor tint to current light conditions. Bright sun, fog, shade, or overcast skies? No problem – everything is handled in an instant. You don't have to stop, change lenses, or deal with the weather – you just ride. A wide field of view and clear vision give you confidence in every turn. Whether you start with a morning ride on freshly groomed slopes or take your last run at dusk, Stealth Photo is always ready.

New **AMBER** lens and visor color

A color that opens up the terrain

No more flat light and poor visibility. The brown Amber tint is essential for days when conditions are less than ideal and is designed to optimize depth perception and contrast in low-light conditions. This lens effectively filters blue light, visually increasing contrast, highlighting uneven surfaces, and helping you read the slope with confidence even in fog, overcast skies, or flat light. Snow gains structure, the terrain gains depth, and you feel in control in every turn. The warm lens tone is easy on the eyes and significantly reduces eye fatigue, even during all-day riding. It is especially appreciated at dusk and twilight, providing crystal-clear vision in the late afternoon hours. With the Amber lens, you gain absolute confidence – even when the weather isn't on your side.

New back protector **AIRGUARD**

Safety you forget about. Confidence you can feel

High performance requires maximum protection. The new **AIRGUARD** back protector is designed to absorb even the hardest impacts without restricting your movement. Thanks to the unique **3D SHOCK PROTECTION AIR** material, which is flexible under normal conditions but instantly hardens upon impact and distributes energy across the entire surface, it provides the confidence that gives you the freedom to ride at full speed and push your limits. The breathable AIR construction effectively wicks away moisture and heat, so you feel comfortable in the protector from the first morning run until the lifts close. The lightweight, flexible construction with adjustable straps ensures that the protector stays firmly and perfectly in place throughout the ride.

Socks

The new collection brings functional construction and stylish design. **SUMMIT** are top-quality compression socks that enhance performance through their properties. Thoughtfully designed zoning provides targeted support in high-stress areas, promotes better muscle circulation, and, thanks to a combination of highly functional materials, ensures effective moisture management. In the children's collection, **TERRY** knit is used to provide optimal thermal comfort in so-called air pockets, and reinforcement in the heel and toe area with **SOLE PAD** has also been added. The new **ZOOMIK** and **KITTENS** socks are therefore an ideal choice for young lovers of winter fun.

Goggles

Ski goggles are an inseparable part of ski equipment, which is why we never forget them in our development. We introduce new shapes and designs in the **SHREDZ** and **ROSELLE** models, expanding our range and the possibilities of combining them with our RELAX helmets. ICE VISION technology together with the enhanced PLATINUM quality – a lens treatment that leads to more even color distribution – provides perfectly clear vision and highlights terrain details. It all starts with reliable visibility and ends with a great ride and unforgettable experiences on the slopes.

Gloves

In our Relax winter gloves collection, premium durability, uncompromising warmth, and maximum safety come together. We introduce two new glove models that define standards for demanding use in snow. Discover top-level equipment that takes winter experiences to a new level! Whether you need unbeatable protection for demanding downhill runs. The men's **RAGNAR** gloves are synonymous with strength and reliability. They combine a masculine, durable back made of genuine leather with targeted padded protection for the knuckles. Or if you want to give our juniors confidence, safety, and comfort in every snow adventure. The **TALON** junior three-finger gloves are primarily a safety piece of equipment. A removable splint and a sturdy tightening strap guarantee maximum support in the event of falls.

HTG78C

RH17A19

HTG61N

RH33H

Activate your style.
Activate performance.

The 2026 collection brings perfectly coordinated ski sets, where modern design meets maximum functionality. **The women's WILD ESSENCE** set, combining the **RH17A19** helmet and **HTG78C FLOW** ski goggles, offers comfort, reliable protection, and perfect visibility in every situation on the slopes.

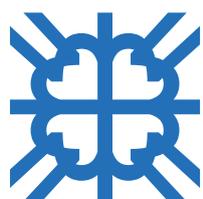

The men's OPTIV set, featuring the **RH33H** helmet and **HTG61N SIERRA** ski goggles, is designed for men who seek a balanced combination of performance, comfort, and style without compromise.

Two sets. One approach
– confident riding from the very first turn to the final run.

SKI RESORTS SUPPORT? FOR SURE!

Mountains in winter have a special power. They attract everyone who loves movement, speed, and freedom on the snow. It is there that moments are created that you remember long after the last run. And that is exactly why RELAX belongs in ski resorts. We are part of the places where winter experiences are born – equipping rental shops and helping to create an environment where everyone can enjoy winter to the fullest. Whether you are on the slopes for the first time or coming back again and again, with RELAX every day in the mountains is about comfort, safety, and the joy of movement.

SKI HELMETS

Stealth

RH24A10 Innovative appearance, more efficient ventilation, magnetic fastening and a spare clear Visor: included. The STEALTH ski helmet with integrated Visor: protects the skier on the slopes by the most modern technologies. Smooth control of all vents ensures perfect air circulation.

TECHNOLOGIE

IN-MOLD SHELL

Extremely light: Relax helmets produced by IN-MOLD technology excel in light weight and are therefore more comfortable to wear. Extremely solid impact resistant core of the helmet is produced by heat and compression molding which leads to inseparable steady component. This technique guarantee strength and flexibility while maintaining high levels of safety thanks to better force distribution while an impact.

HARD SHELL

Extremely resistant: construction HARDSHELL uses solid outer shell with high degree of protection against puncture. Specially designed shell perfectly fits with lightweight molded shock-absorbing helmet's core and thereby provides a compact unit with a long life and high resistance.

I.A.T. SYSTEM

A comprehensive system of internal temperature control combines two unique technologies-system of internal air circulation I.T.C and active ventilation system AIR FLOW.

I.T.C. SYSTEM

Unique air circulation system regulates temperature inside each Relax helmet. System of precisely designed air vents interconnected with air channels integrated into the helmet's core maximizes the flow of air through the helmet and reduces fogging of ski goggles. Fresh air continuously flows through the helmet, cools and automatically regulates temperature inside the helmet.

CROSS PROTECT

Protective brace of hardened polycarbonate on the inside of the helmet increases the resistance of the helmet during side impact and protects the helmet's inner core against mechanical damage.

INTELLIGENT AIR THERMOREGULATION SYSTEM

ACTIVE BOOST

Active ventilation: Smoothly adjustable airflow system with optimally positioned air vents heavily absorbs air which cools the interior of the helmet. It regulates the final temperature and provides high comfort in every situation. With this combination Relax helmets are very well ventilated.

AIRINERGY

Ventilation system with integrated air vents enables optimal airflow. Fresh air dissipates heat and moisture away from the head and thus keeps the head in ideal conditions.

KOMFORT

FIDLOCK MAGNETIC CLICK®

FIDLOCK coming from Germany is one of the most innovative brands in the sports industry, focusing on reasearch and development of products based on combination of magnetic and mechanical lock. A patented solution that combines powerful magnets that automatically connect the buckle and a mechanical lock that allows disconnection only if you really want to do so. All products are designed to make life easier for their users.

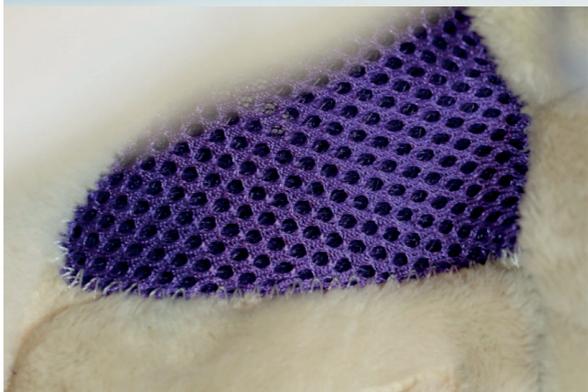

EASY CLICK

Easy and quick fastening of safety straps under the chin improves the helmet's placing on the head. It reduces risk of helmet's movement on skier's head during impact and thus increases protection of his head.

DUAL FIX

Adjustment fitting system has been developed with a maximal emphasis to compactness of placing the helmet on skier's head. By using DUAL FIX (multiple security fitting system) is achieved a high helmet compactness with skier head which significantly increases overall safety. DUAL FIX control in the back of the helmet is very easy and intuitive.

SOFT SENSE

Shaped antibacterial SOFT SENSE padding provides extra warmth and a pleasant feeling. Soft fleece with SENSITIVE treatment is very pleasant to touch and forms an insulating layer protecting skier's head from chilling.

MULTIVISION

The multi-curved surface of the lens is the most technologically advanced optical element composed of two spherical surfaces. The rounded surface is better adapted to the human eye, eliminates the distortion of the transmitted image and thereby achieving a clean undistorted vision of each skier. Advantage of panoramic MULTIVISION lens is maximum sharpness at all angles of view, a perfect peripheral vision and optical precision.

PHOTOCHROMATIC

DYNAMIC ADAPTATION TO LIGHT CONDITIONS

The photochromic visor represents an advanced optical solution that actively adapts to current light conditions. The basis of this technology is a special layer that reacts to the intensity of UV radiation. When sunlight increases, the layer is activated and the visor darkens, reducing light transmission and increasing visual comfort. Conversely, in overcast weather, in the forest, or during late-afternoon skiing, the visor automatically lightens. The photochromic layer thus ensures optimal visibility across a wide range of conditions, from intense mountain sunlight to diffuse light during snowfall. The result is intelligent optical protection that adapts to every situation and provides maximum visual comfort without compromise.

Clear CRYSTAL to Grey CLOUD

Light AMBER to Dark AMBER

USE OF RELAX PHOTOCHROMATIC

- **Morning runs and changing light**
During the first runs of the day, when bright sun alternates with long shadows, the visor automatically adapts and ensures stable vision without glare.
- **Overcast weather, fog, or snowfall**
In diffuse light, the visor lightens and increases contrast, helping to better perceive uneven terrain, moguls, and icy patches.
- **Intense mountain sun**
On open slopes or glaciers, the visor darkens and eliminates glare, protecting the eyes and increasing safety at higher speeds.
- **All-day skiing without worries**
One helmet, one visor, endless possibilities. Intelligent protection that covers all the light conditions of your day.

WHY CHOOSE A PHOTOCROMATIC VISOR

- Adaptability: Automatically changes tint according to UV intensity.
- Perfect vision in any weather: The visor adapts itself to light conditions.
- One helmet for the whole day: No changing goggles or visors.
- Eye protection and higher safety: Less glare, more control on the slopes.
- Modern technology for demanding skiers: A smart solution without compromise.

Wild Essence

WILD ESSENCE is the bestseller among Relax helmets. With its functional attributes, anatomical shaping and IN-MOLD construction, it is the right helmet for demanding skiers. AIRINERGY ventilation maximizes airflow and automatically regulates the temperature of the helmet's interior. The SOFT SENSE inner lining with antibacterial treatment wicks moisture away from the helmet interior and forms an insulating layer to protect the head from cold.

Stealth

An updated look, more efficient ventilation, magnetic fastening, and a spare clear visor included in the price – the STEALTH ski helmet with an integrated visor offers maximum protection and comfort on the slopes. Smooth ventilation adjustment ensures optimal air circulation, while the panoramic MULTIVISION visor made of impact-resistant DURAMAX material with an ANTIFOG treatment provides excellent visibility even in adverse weather conditions. The modern visor mounting system allows easy and trouble-free operation.

RELAX

Stealth Photo

The iconic STEALTH model, long appreciated for its comfort and precise ergonomics, comes in a new generation as STEALTH PHOTO with an advanced photochromic visor. This adaptive visor uses a highly sensitive layer that automatically changes its light transmission according to the intensity of UV radiation. In strong sunlight, it darkens and eliminates glare; in overcast conditions or snowfall, it quickly lightens and provides maximum contrast and terrain readability. As a result, it offers a universal solution for changing mountain conditions without the need to change goggles or visors. The integrated visor also provides sufficient space for prescription glasses, significantly increasing comfort for users who prefer a simple and functional solution.

OPTIV

RELAX

Optiv

Introducing the RELAX OPTIV ski helmet – the ideal choice for those looking for an innovative shape and modern style. With balanced proportions and innovative design, it offers maximum comfort and protection on every ride. Thanks to IN-MOLD technology, the OPTIV helmet is not only extremely safe, but also lightweight and comfortable to wear all day long. If you want a helmet that combines cutting-edge technology, modern looks and outstanding comfort, OPTIV is the right choice. Enjoy superior performance and a design that not only protects you but also impresses!

Twister

Stylish helmet with robust construction which provides excellent protection either at jumps in snowparks or in freeride. This helmet has everything you would expect, such as AIRINERGY ventilation system which keeps your head dry, and comfortable earpads usable also for listening your favorite music, stylish colour that match to your clothes and much more. TWISTER helmet will become an indispensable accessory as well in as out snowpark.

RH18A13

PARAMETERS

IN-MOLD SHELL

Extremely light: Relax helmets produced by IN-MOLD technology excel in light weight and are therefore more comfortable to wear. Extremely solid impact resistant core of the helmet is produced by heat and compression molding which leads to inseparable steady component. This technique guarantee strength and flexibility while maintaining high levels of safety thanks to better force distribution while an impact.

AIRINERGY

Ventilation system with integrated air vents enables optimal airflow. Fresh air dissipates heat and moisture away from the head and thus keeps the head in ideal conditions.

EASY CLICK

Easy and quick fastening of safety straps under the chin improves the helmet's placing on the head. It reduces risk of helmet's movement on skier's head during impact and thus increases protection of his head.

Twister Visor

Very light kids helmet TWISTER Visor: perfectly ensures the safety of your young athlete. High quality design and certified materials guarantee quality and comfort. The construction of the IN-MOLD SHELL helmet uses a hardened, impact-resistant core that is also flexible enough and thanks to a better force distribution system, greatly reduces the impact of the fall. The inner washable SOFT SENSE padding protects your head from being cold. Our multiple security fitting system DUAL FIX ensures maximal compactness of the helmet and head and enhances the already high safety of the helmet.

SKI GOGGLES

Skyline

HTG69H

The medium-sized SKYLINE downhill ski goggles with the advanced DUAL FIT system adapt perfectly to the shape of the face and ensure a secure, comfortable fit. The flexible frame combined with multi-layer POLAR FOAM effectively absorbs moisture and provides high comfort even during all-day skiing.

TECHNOLOGY

MULTIVISION LENS

The multi-curved surface of the lens is the most technologically advanced optical element composed of two spherical surfaces. The rounded surface is better adapted to the human eye, eliminates the distortion of the transmitted image and thereby achieving a clean undistorted vision of each skier. Advantage of panoramic MULTIVISION lens is maximum sharpness at all angles of view, a perfect peripheral vision and optical precision.

SOFTVISION LENS

The surface of the lens is rounded at least in one of the two directions. The surface of the lens affects the stream of the beam only perpendicularly to the axis of the lens and the view processing is much easier. To avoid distortion of the view the SOFTVISION lenses are equipped with an optical correlation which sharpens the vision and increases the perception of surrounding objects.

ICE VISION

Optically clear: We put emphasis on optical purity of lenses which has the greatest impact on the real vision. In cooperation with Italian manufacturers and in laboratory environment are produced lenses of the highest quality which eliminate image distortion and transmit the image in the highest quality possible. Integrated heat shield compensates for temperature differences in external and internal environment of goggles and thus greatly reduces the formation of ice on the lens and contributes to the high comfort of the use of our goggles.

AIR FOG

Unique ventilation system effectively combines active and passive elements of ventilation. The shape and construction of frames is designed for optimal airflow so the moisture is always quickly and constantly draw off and the inner lens is kept dry. The system is fully compatible with helmet's ventilation systems AIR FLOW and ACTIVE BOOST.

ANTIFOG

Technology at which is an invisible layer of nanoparticles applied to the inner lens and thereby preventing condensation of water vapor on the surface and so eliminating fogging. Using this technology maximizes the lifetime of goggles while maintaining high clarity of the lens.

MAGNETIC X-CHANGE

Innovative magnetic system ensures extremely fast exchange and perfect fit of lens in the frame. Replacement becomes very simple and fast, the lens can be exchanged within a few seconds to respond to reduced visibility almost instantly.

CONSTRUCTION

FLEX FIT

Relax ski goggles offer extremely low weight and maximum flexibility. FLEX FIT, unique technology of frames production, significantly reduces weight and FLEX CORE, highly elastic material, ensures maximum flexibility of the frame. Higher level of safety is also achieved by high adhesion of goggles; the frame forms with the skier's face a compact unit and so better absorbs and distributes collision's impacts.

DURAMAX

Certified safe: The material used in the production of lenses is made of impact-resistant polycarbonate especially developed for protection against rough damage. It is by 20% lighter compared to conventional plastic lenses and is maximally safe. The safety is guaranteed by testing in accredited laboratory.

DUAL FIT

The aim of our engineers was to develop an advanced system that would be simple, reliable and functional. For maximum comfort and perfect adhesion of goggles to skier's face we developed the DUAL FIT system. Inserting the strip into the side buckle, uniquely designed for each model, creates a compact unit with the helmet.

ANTISLIP

Anti-slip silicone print on the inside of the strap prevents shifting.

ERGO FOAM

Anatomically shaped foam in the nose area perfectly adapts to the shape of the nose. Goggles better adhere to the face without pressurizing or reducing the comfort.

POLAR FOAM

POLAR foam with a multi-core construction is very soft, cozy and stable. High resistance against impact is achieved by combining unique composition and different density of each layer. The outer microfleece is gentle to the skin, absorbs and takes away moisture from skier's face and provides a high level of comfort.

OTG

OTG foam treatment on the inside of the goggles for a comfortable fit over dioptic glasses.

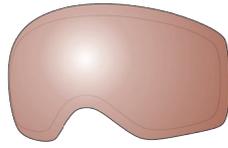

Lens colours

CLOUD grey

Universal use / Makes your vision brighter / High elimination of reflections

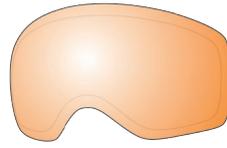

These lenses are suitable for all weather conditions, especially then in bright light. With their soft tone they improve sight comfort in any situation.

BRONZE brown

Universal use / Sharper sight / Reduces eyestrain

These lenses absorb the natural blue light around us and help to sharpen the sight. The BRONZE tone was specially designed to provide greater contrast in low light conditions. These lenses help to reduce the eyestrain.

LUNAR orange

Universal use / Best for sport

Popular colour for any sport activities because of its universality. Lets in greater spectrum of light and therefore is suitable for bright as well as for dark conditions.

ROSE pink

Universal use / High sharpness and contrast

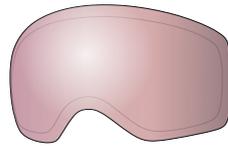

Truly universal colour of lenses suitable for a wide range of light conditions. Pink colour maximizes the depth of sharpness and contrast.

CRYSTAL clear

Ideal for cloudy weather

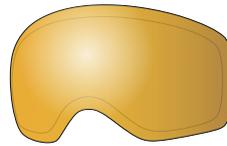

Total clarity makes it easy to see even in the darkest conditions.

PURPLE

Universal use / Partly cloudy and overcast conditions

The purple lens is a balanced choice focused on contrast, true color reproduction, and versatility. Suitable for a wide range of light conditions. The purple lens color is comfortable for long rides on open slopes as well as in mixed terrain.

AMBER

Universal use / Better contrast / Overcast and partly cloudy conditions

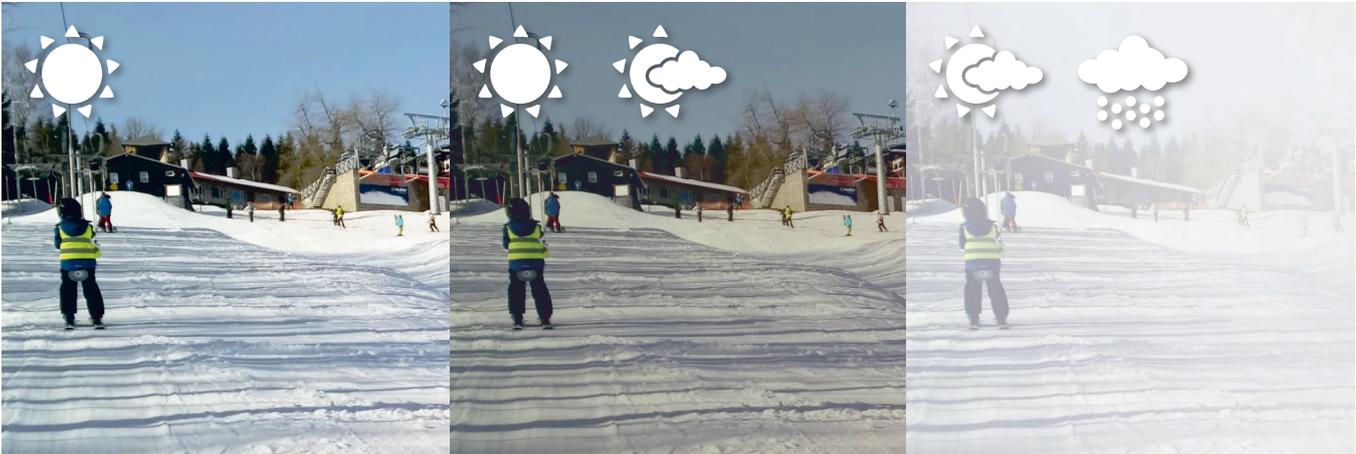

The amber lens for ski goggles is a universal choice focused mainly on improved contrast and terrain readability. It absorbs naturally reflected blue light, thereby sharpening vision. The lens is easy on the eyes and helps reduce eye strain.

Yellow

Special use / Poor light conditions (overcast, fog, snowfall)

The yellow lens for ski goggles maximally brightens the image and increases contrast. Yellow lenses are ideal for very poor visibility conditions, allowing you to ride safely even in fog or snowfall. They are often used as a spare lens for darker variants.

SUN FILTER CATEGORY ☀

S0

Cat. 0: clear or very light filter (visible light transmission 80-100%).

S1

Cat. 1: light filter (visible light transmission 43-80%).

S2

Cat. 2: medium dark filter (visible light transmission 18-43%).

S3

Cat. 3: very dark filter (visible light transmission 8-18%).

S4

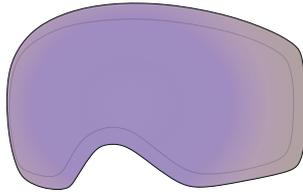

Cat. 4: very dark filter (visible light transmission 3-8%).

Ace

RELAX ski goggles ACE are top ski goggles that are rather of a smaller size suitable for man and women. Flexible material FLEX CORE used during the frame production delivers maximal flexibility and multi-core POLAR FOAM with a skin-friendly microfleece increases the resulting comfort of use. The MULTIVISION panoramatic lens with a rounded shape that copies the shape of human eye provides excellent optical characteristics allowing accurate terrain reading even at high speeds. The non-slip print on the inside of the strap prevents any movement and keeps the goggles firmly on the helmet.

Flow

The FLOW ski goggle model is designed with narrower and feminine faces in mind to provide the ultimate in comfort and style. The main feature that distinguishes the new model is the MAGNETIC X-CHANGE magnetic interchangeable lens. Thanks to this technology, you can change lenses in seconds, allowing you to quickly adapt to the current conditions on the slope. When the sun is shining, reach for the PLATINUM mirrored lenses, which not only protect your eyes from glare, but also add a touch of elegance to your look. For adverse conditions such as snowfall or night skiing, we have clear CRYSTAL visors. These visors are always included and give you optimal visibility on every winter adventure.

CERTIFIED
QUALITY

Airguard

ROP07A

The AIRGUARD back protector uses the patented 3D SHOCK PROTECTION AIR material, which is soft and flexible during normal movement but instantly hardens upon impact and effectively distributes energy. The open ventilation structure, low weight, and ergonomic shaping ensure high breathability, freedom of movement, and a stable fit even during all-day use.

TECHNOLOGIE

AIR STREAM

Massive integrated AIR STREAM vents provide the best possible airflow control. The passive circulation system effectively removes moisture from the body even during high physical activity, optimizing so the body microclimate.

ANTI SLIP

The silicone anti-slip printing on the inside of the vest helps keep the protector in the most appropriate place, thereby achieving greater ease of use.

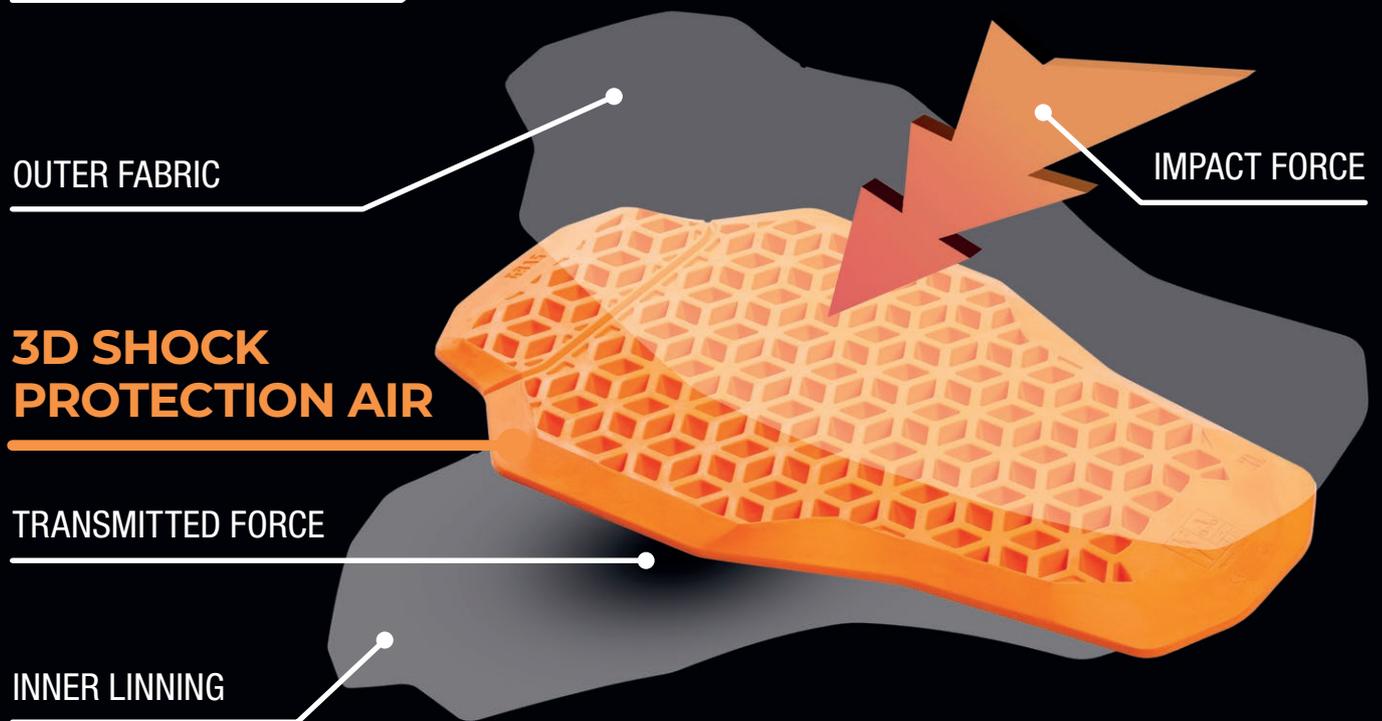

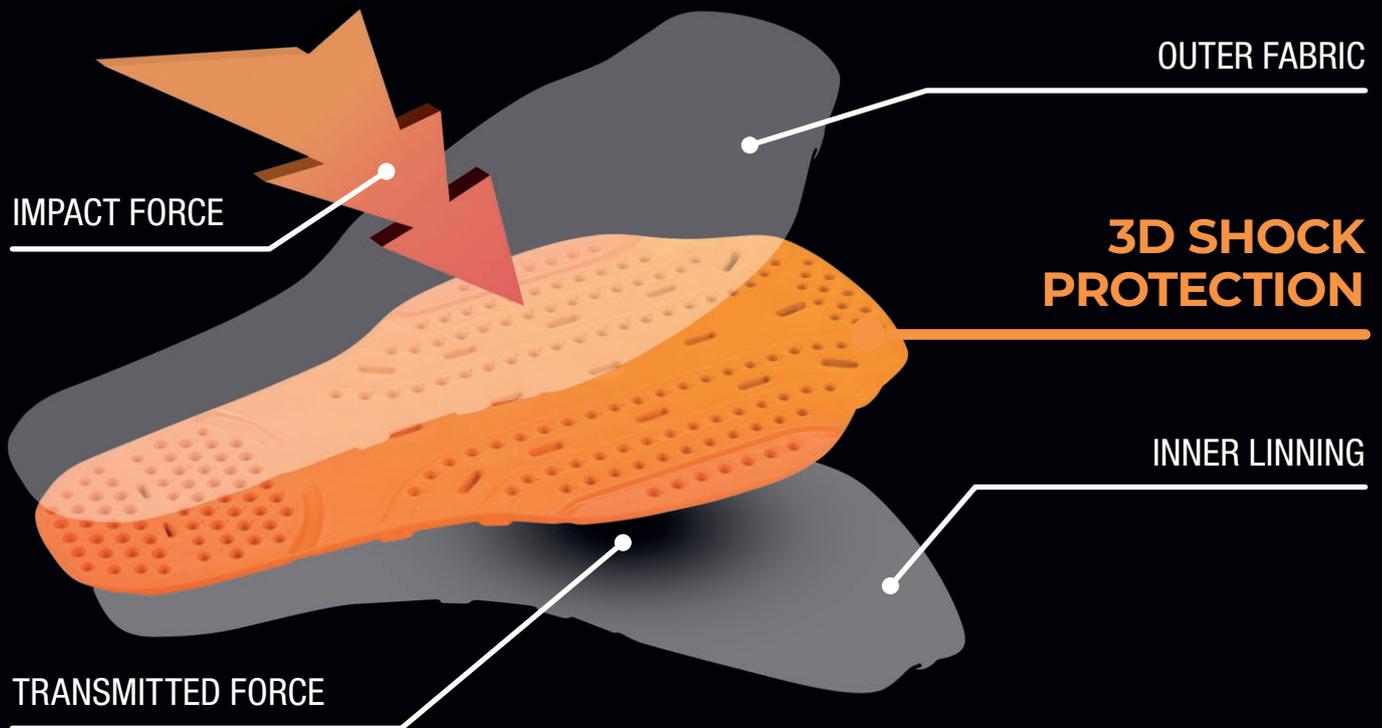

PRO BELT

The integrated PRO BELT made of elastic material and with a Velcro allows precise setting of the back protector and prevents undesired upward movement.

YKK®

YKK, company producing high-quality zippers, has become a world-renowned company thanks to years of experience and a global research and development network. Thanks to the YKK zippers, we can guarantee perfect operation for a long time. YKK supplies products and services with added value that enhance prestige and differentiate the brand.

A certified protector using the unique features of the patent-protected intelligent 3D SHOCK PROTECTION material, which, thanks to its softness, perfectly adapts to your body shape, but when it comes to impact, the protector instantly stiffens and absorbs the impact energy.

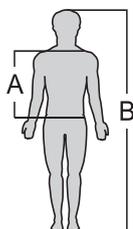

CERTIFIED QUALITY

All RELAX back protectors undergo rigorous testing and meet the European standard EN 1621-2, which guarantees maximum safety and protection.

Speedmaster EVO

When developing a revolutionary back protector that is integrated into a comfortable and practical vest with a PRO BELT inner lumbar strap, we have applied the knowledge of design and ergonomics. The protector itself uses the unique features of the intelligent 3D SHOCK PROTECTION, which, due to its softness, perfectly adapts to the shape of your body, but when it comes to impact, the protector instantly stiffens and absorbs energy of the impact as reliably as the classic shell spine protector. Massive AIR STREAM vents ensure good ventilation even at high intensity of physical activity.

Airguard

The AIRGUARD back protector represents a modern system designed to provide maximum protection without compromising comfort or freedom of movement. The core of its construction is the patented intelligent material 3D SHOCK PROTECTION AIR, which sets a completely new standard in impact energy absorption. This unique flexible 3D material forms a flexible structure that remains soft and compliant during normal movement, but at the moment of impact instantly hardens and effectively distributes the impact energy across the entire surface of the protector. The open AIR structure creates natural ventilation channels, keeping the protector pleasantly breathable even during intense riding or all-day use. Ergonomic shaping and low weight ensure that AIRGUARD perfectly follows the body's movement, does not restrict riding, and stays securely in place thanks to a precise, adjustable fastening system.

Ragnar

RR36A

The men's RAGNAR gloves represent the pinnacle of winter equipment – combining the premium durability of genuine leather with uncompromising thermal comfort and perfect protection even in the most demanding conditions.

TECHNOLOGY

3D-MOTION

Based on the expertise of physicians and testing by professionals we developed 3D-MOTION, an unique ergonomics solution for gloves. In cooperation with leading gloves manufacturer with a long tradition and experience we designed 3D pattern and construction respecting ergonomics of skier's hand. By anatomic shaping copying fingers radius we achieved a natural shape of the glove with high comfort of use. In practice this shaping eliminates some of the annoying problems that can be caused by long-term skiing.

AQUA PROTECT

Relax ski gloves offer lasting protection and comfort in bad weather conditions. Permanent water resistancy guarantees waterproof PU membrane with minimum rating 10000 mm² and minimum breathability 6000 g/m²/24 h.

SOFT LOFT

Insulating SOFT LOFT material with balanced thermal comfort ensures high level of comfort. Using thermal control material composed of elastic hollow fibers which do not lose elasticity, the insulation has optimal thermal properties. By using hollow fibers is achieved so called "loft" effect which in practise provides a better moisture management and high level of heat retention without great weight, even after long use or washing.

LOOP

Unwanted loss of gloves is a thing of the past. A simple and practical LOOP made from a flexible material that is worn on the wrist and allows you to safely remove the gloves without the risk of losing them.

SOFT PLATIN

Cold, wind or snow, these are conditions that you feel during winter sports. Modern functional SOFT PLATIN material composed of two layers suitable for manufacture of breathable and very comfortable shell layers of clothing will protect you and so you will make the most of your outside activities.

REAL LEATHER

Leather is a natural material with its typical advantages such as strength, flexibility and endurance. Another advantage is that this material adapts well to climatic conditions. It's the most durable material with long lifetime. Used on the palm protects better against damage and improves skier's grip. The maintenance is very easy.

SNOW PROTECT

Very simple and intuitive regulation control method prevents from snow penetration into the Relax glove. It was designed to ensure maximum comfort of use. The regulation is controlled with only one hand. Strong and elastic rubber bands perfectly seal the glove with maximum accuracy. The cuff can be dragged over the jacket's sleeve which ensures secure closure and prevents snow from penetrating the interior of glove even in tough conditions.

Frost

Men's ski gloves FROST are developed for the purpose of maximum durability and functionality, which is ensured by the insulating material SOFT LOFT, AQUA PROTECT membrane guarantees a water resistance of min. 10,000 mm and at the same time a breathability min. 6,000 g/m²/24 h. The real leather in the palm area guarantees durability, flexibility and strength. It is highly adaptable to different climatic conditions and does not slip when contacting the pole handle. The gloves have an adjustable wrist tightening and fit better on the hands.

Scadi

The women's SCADI mittens are the embodiment of winter luxury and warmth. Experience unbeatable thermal comfort with the SCADI women's mittens. Your hands will be pampered by an inner finger lining made of soft and warm material, delivering a true sense of luxury. The core of the mittens consists of the modern SOFT PLATIN material and SOFT LOFT thermoregulatory insulation, which together ensure maximum warmth without unnecessary bulk. For long durability and a perfect grip, the palm and back of the mitten are fitted with highly durable and exceptionally soft genuine leather. In addition, thanks to the premium AQUA PROTECT membrane, which guarantees water resistance of at least 10,000 mm and breathability of 6,000 g/m²/24h, your hands will stay dry and comfortable even in the most demanding winter conditions. SCADI – warmth you can rely on.

WINTER BEANIES

Fiore

RKH238C The FIORE beanie combines an elegant knitted look with warm comfort for cold winter days. A stylish pom-pom and fine texture make it a timeless accessory for the mountains as well as the city.

TECHNOLOGY

POLYACRYL

Fine elastic fiber was especially developed for increased protection against hypothermia. Material made from this fiber excellently resists weather conditions, is fouling resistant, does not shrink and is easy to wash. Fiber has natural protection against microorganisms. With its benefits the material is very similar to wool.

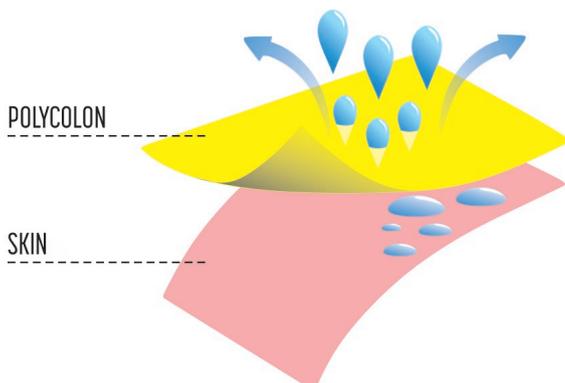

MERINO

Merino wool obtained from specially bred Australian sheeps is natural fiber with excellent natural thermal insulation characteristics protecting against hypothermia. Thanks to the unique composition of the wool fiber the material is able to absorb moisture in the equivalent of up to a third of its weight without being wet on the touch and therefore the wool warms even if moist. Merino wool has a natural ability to withstand without odour for a long time even after a prolonged use. In addition in the sun provides high protection against UV.

WOOL

Thanks to its thermal insulation characteristic the wool is often used in the production of modern insulating layers of clothing. The wool has a high absorbency and elasticity, however the greatest potential is in its immediate insulating characteristic which you will mostly appreciate when you need quickly to warm up. This characteristic is determined by the structure of individual fibers between which there are small air pockets which create a perfect insulating effect. Wool fleece thicker than 34 microns can absorb a lot of moisture, warms in cold as well as in wet conditions.

POLYCOLON

Functional hydrophobic fibers made from polypropylene Meraklon yarns. Material made from POLYCOLON fibers excels in sophisticated moisture management, the fiber does not absorb the moisture, it takes it away and passes it to the outer layer where it evaporates. It has very good thermal characteristics and is up to 40% lighter than cotton. POLYCOLON keeps dirt away, is suitable for extreme conditions with high emphasis on heat and drought.

FLEECE

This material has very good thermal insulation characteristics. The fleece is very soft and pleasant to touch. Indisputable advantage of this material is that it preserves the feeling of dryness. The fibers structure increases the moisture transfer, unlike natural materials it does not absorb the moisture but only transfers it to the upper layer and therefore remains dry on the surface.

CRYSTAL

This collection uses premium crystal, which has long been a symbol of the highest quality. Crystal components are renowned for their innovative perfection and precise craftsmanship, making them a sought-after element among leading global designers in the fields of fashion and accessories. Crystal-clear and dazzlingly shiny stones can also be found on selected models of Relax knitted beanies. These models are decorated with exclusive crystals that give the beanies a luxurious look and a unique sparkle.

DESIGNED IN CZECH REPUBLIC

The RELAX brand is based on designing products in the Czech Republic. We rely on local talent and know-how to create quality and innovative products with unique design, focused on the needs of the market. Our goal is to combine traditional craftsmanship with modern trends, providing customers with a unique and functional experience

OEKO TEX

International certificate "Confidence in textiles" guarantees that during the production the environment was not exposed to toxic chemicals and that your skin will not be exposed to it as well. Certified products meet high quality standards and all prescribed norms protecting customers and the environment.

SKI SOCKS

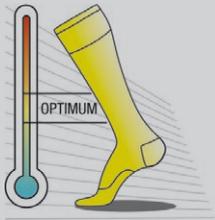

Alpine

RS031A

Relax ALPINE socks are ideal for all-day skiing thanks to the high proportion of MERINO wool, which ensures optimal thermoregulation, keeps you warm at a calmer pace, and effectively wicks moisture away during active movement. The SOLE PAD reinforcement on the sole provides comfort, protects high-stress areas, and extends the lifespan of the socks.

TECHNOLOGY

MICROCLIMATIC

By use of unique combination of functional materials, we have achieved excellent thermoregulatory properties. Socks heat at low temperatures and release heat and humidity at high temperatures. This guarantees the ideal microclimate in the ski boot, the leg does not overheat and is sufficiently protected against low temperatures.

ERGOFIT

Ergonomic design ERGO FIT adapts to individual shape of each leg by exact proportion of elastic material, ensures the sock to hold tight, it all makes the perfect fit. Modern anatomic construction improves the efficiency of socks.

FLEXI GRIP

Comfortable elastic band on top holds the sock firmly/well on the leg due to its high extensibility. It ensures free and confident moving to muscles.

G-FORCE

Shinbone is exposed to the maximum strain. With each curve the pressure changes from the largest to the smallest. G-FORCE's precisely placed enhanced protection has been developed on the basis of knowledge of the forces acting on the exposed areas of the tibia. The protection structure recovers energy, supports stability and performance.

KICKER

Spot amplification in the instep area effectively distributes the pressure and supports the sock stability on the foot, improves the shock absorption. During intense exercise protects the instep bone against bruising.

PRO PAD

Extremely stressed parts include also the ankle. The softened part located in the delicate area of the ankle effectively reduces friction, minimizing the incidence of bumps without limiting the movement.

WRAP-X

Using a reinforced construction and durable materials in the sensitive area of the Achilles tendon, we created a protection for one of the most vulnerable parts of the legs.

L/R ANATOMIC

Anatomic design for left and right leg allows the precise placement of protective and supportive zones. It contributes to the ideal ergonomics of the sock and ensures maximum comfort.

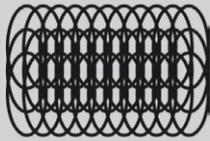

SOLE PAD

Heels and fingers deserve special treatment. Durable polypropylene with soft padding on exposed areas of the foot enables perfect thermoregulation properties and provides excellent protection to the foot against bruising during the excessive physical activity.

MERINO

MERINO wool is lighter, finer and more comfortable to wear than common wool. The natural properties of MERINO wool do not compare to any other material. However, it retains the positive characteristics of conventional wool like fast absorption of moisture, breathability and the ability to heat even in the wet state. In the summer it cools, warming in winter. Even with prolonged use, it can prevent bacterial growth and prevent odors.

TERRY

Kids socks must contain the best of socks for adults, while respecting the fact that they are worn exactly by children. The fact is that child's body is not processing the thermoregulation as well as an adult, that is why we tend to dress children more warm. For kids and juniors, we thought about this specifics and used very comfortable TERRY textiles with raised uncut loops of thread covering both surfaces, which create so-called air pockets and thus keep the foot of a small skier in pleasant warmth.

CORDURA®

Highly durable technical material made of polyamide yarns, which extends the life of the socks while leaving them breathable and lightweight. This material perfectly protects against unpleasant rubbing inside the shoe, thus contributing to greater wearing comfort.

Q-SKIN®

Q-SKIN® is a polyamide 6.6 fibre in which silver ions are inserted directly during the spinning process meaning that it limits bacterial growth preventing body odor. Q-SKIN® takes care of the skin, providing its wearer with breathability, freshness, hygiene and comfort. Proven bacteriostatic effectiveness as certified by the MIS PLUS Institute of Zürich according to DIN ISO 20743 standards: 10-2007. Stands up to repeated washing as certified by the MIS PLUS Institute of Zürich according to JIS L 1902/02 standards.

SENS TO SEAM

Flat seams reduce the risk of blisters forming during intense exercise.

Alpine

Relax ALPINE socks are perfect for an all-day skiing. The high proportion of MERINO wool optimizes thermoregulation throughout use. During moderate activity it heats well, but while actively moving enhances moisture management and thereby prevents overheating. The SOLE PAD reinforcement on the sole of foot ensures comfort and protection of critical areas and extends the lifecycle of the sock.

MATERIAL COMPOSITION:
POLYAMID / ACRYLIC / MERINO WOOL / POLYPROPYLEN / ELASTAN

Nordic

Highly efficient cross-country ski sock NORDIC with a combination of Merino wool and functional materials ensures a stable warmth at low temperatures, also provides an excellent thermoregulation by using MICROCLIMATIC technology. The sock is anatomically shaped for right and left leg, thereby allowing precise placement reinforcements in exposed areas. Instep protection is provided by KICKER spot technology, which decomposes excessive pressure and thus protects the cranial bones during impact. The elastic bandage in ankle area securely protects it and thus supports the natural movement of the foot in the boot.

Frozelle

RELAX presents the FROZELLE socks, which combine modern technologies with natural materials. A higher proportion of organic cotton ensures high comfort, breathability, and long-lasting durability, while SOLE PAD technology provides stable foot support and the ergonomic fit supports natural movement. G-FORCE protective zones in the shin area increase comfort and protect against pressure from boots.

RELAX

Summit

SUMMIT are top-quality compression ski socks designed for maximum performance and support. The combination of functional materials ensures effective moisture management, optimal elasticity, and high durability even during all-day use. Light compression supports muscle circulation and recovery, while the G-FORCE protective zone on the shin improves power transfer and control over the skis.

Zoomik

RELAX expands its children's collection with ZOOMIK ski socks inspired by the world of Minecraft. Thanks to the comfortable TERRY knit, they provide optimal thermal comfort in so-called air pockets. The comfortable FLEXI GRIP elastic cuff keeps the sock securely in place, while the elastic material with ERGO FIT technology adapts to the shape of the foot, minimizes friction, and provides confidence inside ski boots.

Kittens

KITTENS are children's ski socks with a cute cat design that young skiers will instantly fall in love with. The warm and soft TERRY knit provides reliable thermal comfort, while the SOLE PAD polyamide reinforcement in the heel and toe areas ensures durability and long service life. The elastic material with ERGO FIT technology perfectly adapts to the shape of a child's foot and minimizes friction. A perfect choice for little winter lovers who want to shine with both style and comfort.

Thunder

The THUNDER ski sock for small enthusiasts meets the most demanding requirements of functional materials. The G-FORCE reinforcement in the shinbone during the intense activity, decomposes excessive pressure and thus increases the performance of the athlete. Thanks to the unique combination of MERINO wool and high-tech polyamide in SOLE PAD reinforcement, the sock keeps warm and regulates moisture well.
